PROFILE	Software Engineering student with hands-on experience building full-stack web applications. Demonstrated ability to work collaboratively on team-based projects, as well as lead solo initiatives. Passionate about solving real-world problems through clean, scalable code, with good foundations in database design, REST APIs, and basic ML fields.
SKILLS	Languages: Python, JavaScript, Java, C++ Frontend: React, Next.js, TailwindCSS Backend: Node.js, Express.js, Django, FastAPI, Springboot Databases: PostgreSQL, MySQL, Oracle, PL/SQL Tools & Concepts: Docker, Git, WebSockets, Celery, REST APIs, OOP, Design Patterns, Software Design
PROJECT EXPERIENCE	EduVision An AI-powered educational platform that automates handwritten script evaluation using OCR and LLMs, generates personalized learning content, and enables real-time video tutoring for K-12 classrooms. - Led frontend development using Next.js, React, and TypeScript — building responsive dashboards, analytics visualizations with Recharts, and interactive UI components. - Designed and built the real-time tutoring module with LiveKit WebRTC integration, Django Channels WebSocket communication, and session lifecycle management supporting multi-student batch video sessions. - Developed the AI content generation system enabling on-demand creation of study guides, worked examples, and practice problems using Google Gemini, with asynchronous processing via Celery and role-based personalization. Skill Sync A full-stack web platform that provides personalized career guidance, CV building, and intelligent skill extraction - Developed a CV/Profile Builder module with structured resume management (experience, education, projects, tools), AI-generated professional summaries, bullet-point optimization, and automated PDF parsing for structured data extraction using generative AI. - Implemented an intelligent skill extraction pipeline that validates user-submitted skills against an admin-curated skills database, enabling accurate skill-gap analysis and AI-driven course/job recommendations. - Developed a working prototype within 24 hours as a part of hackathon IUTVerse A full-stack campus social platform for a dedicated University, enabling real-time communication, academic collaboration, and community engagement, built with React, Express.js, PostgreSQL, and Socket.IO. - Designed the social post system with threaded comments, multi-type reactions, anonymous posting, and a personalized content feed serving the university community - Built a real-time messaging module with conversation management, paginated message history, and read-status tracking using WebSocket-based architecture - Developed the job board featuring application tracking with status management, and threaded discussion support on job listings
EDUCATION	Islamic University of Technology 2023-2027 Bachelors of Science in Software Engineering
HACKATHONS	IIUC Hackathon 2025 (Top 10) Built a career guiding platform IUT CodeSprint Hackathon (1st Place) Built a university social media platform
