Professional Summary

Aspiring Software Engineer with practical experience developing full-stack applications, AI-powered solutions, and database-driven systems using modern technologies. Strong problem-solving mindset with a passion for building scalable software and continuously learning new technologies to solve real-world challenges.

Education

Islamic University of Technology <i>Bachelor of Science in Computer Science (CGPA: 3.75 / 4.00)</i>	Expected August 2027 Gazipur, Bangladesh
Chittagong Cantonment Public College <i>Higher Secondary Certificate (HSC)</i>	2022 Chittagong, Bangladesh

Projects

IUTVerse | *React.js, Django, Django REST Framework, Supabase* | [GitHub](#) | [Demo](#)

- Designed the social post system with threaded comments, multi-type reactions, anonymous posting, and a personalized content feed serving the university community.
- Built a real-time messaging module with conversation management, paginated message history, and read-status tracking using WebSocket-based architecture.
- Developed the job board featuring application tracking with status management, and threaded discussion support on job listings.

EduVision | *OCR, KaTeX, LiveKit, Websockets, Celery, Docker* | [GitHub](#)

- Led frontend development using Next.js, React, and TypeScript — building responsive dashboards, analytics visualizations with Recharts, and interactive UI components.
- Designed and built the real-time tutoring module with LiveKit WebRTC integration, Django Channels WebSocket communication, and session lifecycle management supporting multi-student batch video sessions.
- Developed the AI content generation system enabling on-demand creation of study guides, worked examples, and practice problems using Google Gemini, with asynchronous processing via Celery and rolebased personalization.

Backfire OS | *Next.js, Gemini, Supabase, pgvector* | [GitHub](#) | [Demo](#)

- Created an AI regulatory pre-mortem system that classifies business campaign risks into five failure categories and generates forward-dated incident reports, projected blast radius, remediation steps, and public apologies.
- Designed a multimodal red-teaming system using Gemini Vision and Banglish sentiment RAG to evaluate campaigns through multiple adversarial personas.
- Optimized LLM usage from six calls to one structured panel call per simulation, reducing API overhead while streaming verdicts through Server-Sent Events.

Cafeteria Crisis System (DevOps Project) | *Docker, GitHub Actions, FastAPI, PostgreSQL, Redis, RabbitMQ, Nginx*

- Architected a 5-service microservices system with service-isolated PostgreSQL schemas, independent Dockerfiles, and a bridge-networked Docker Compose orchestration wiring dependency-ordered startup via service_healthy health-check gates on Postgres, Redis, and RabbitMQ.
- Built a GitHub Actions CI pipeline running parallel pytest jobs per microservice, followed by a dependent Docker Compose integration stage that builds all containers and polls each service's /health endpoint with retry/backoff before tearing down.
- Implemented cross-service observability by standardizing /health and /metrics endpoints on every service.

SkillsSync | *React, FastAPI, SQLAlchemy, PostgreSQL, Gemini, JWT, Docker* |  GitHub

- Built an admin-curated skills and learning platform with role-based dashboards, audit-logged management of users/skills/jobs/courses/opportunities, and a skill taxonomy covering prerequisites, difficulty, market demand, and course mappings.
- Designed AI job recommendations over curated postings using profile skills, experience, and career interests, producing match scores, skill gaps, strengths/concerns, and course recommendations for missing skills.
- Implemented SDG 8-aligned local opportunity recommendations for internships, trainings, jobs, and youth programs, pre-filtering opportunities by career track/skills and generating English/Bangla/Banglish explanations for youth-focused contexts.

CareerPilot | *Next.js, TypeScript, FastAPI, Supabase, pgvector, Gemini, JSearch, Docker* |  GitHub |  Demo

- Engineered a CV intelligence pipeline that parses PDF/DOCX/manual resumes into semantic chunks, supports active-resume switching, and serves evidence-grounded RAG QA with retrieval fallbacks.
- Built a live Job Hunter workflow using JSearch/manual job ingestion and hybrid fit scoring based on skill overlap plus resume-chunk semantic similarity, returning ranked jobs with matched skills, missing skills, and CV evidence snippets.

Technical Skills

Languages: C++, Java, Python, JavaScript, TypeScript, SQL

Frontend: React.js, Next.js, Vue.js, Tailwind CSS

Backend: Django, Django REST Framework, FastAPI, Spring Boot, Express.js, Node.js

Database: PostgreSQL, MySQL, MongoDB, Redis, Supabase

AI/ML: TensorFlow, PyTorch, OCR, RAG, pgvector

Tools/Platform: Git, GitHub, Docker, Postman, Celery, Jupyter Notebook

Concepts: REST API, OOP, Database Normalization, WebSockets, Design Patterns

Hackathons

IUT Codesprint	January 2026
<i>First Place</i>	
IIUC Tech Fest	November 2025
<i>15th place</i>	
SUST CSE Carnival	July 2026
<i>Finalist</i>	
Cloudcamp: Infinity AI Buildfest	June 2026
<i>Finalist</i>	
Aust Mindsparks Project Showcase	June 2026
<i>Top 15</i>	
CUET SciBlitz Hackathon	July 2026
<i>Top 30</i>	
IUT DevSprint (DevOps Hackathon)	April 2026
<i>Top 10</i>
